### **PULSAR PROCESS MEASUREMENT & GREYLINE INSTRUMENTS AMALGAMATION**

**[December 2019]** Pulsar Process Measurement Ltd are pleased to announce their amalgamation with Greyline Instruments Inc.

Pulsar Process Measurement Ltd manufactures and supplies level, volume, open channel flow, pipe flow, and sludge interface measurement and pump control instrumentation. Since 1997, Pulsar has risen to become one of the world-leading non-contacting measurement instrumentation manufacturers and their products are used in a wide variety of applications.

Greyline is a worldwide leader in ultrasonic instrumentation for wastewater, industrial, and environmental markets. Since 1986, Greyline has developed, manufactured, and marketed industrial flow and level monitoring instruments including clamp-on ultrasonic flow meters and open channel flow meters.

Both companies hold their customers at the forefront of their operations, and the amalgamation means more technology, more products, and more global support for our customer base. The combining of these two companies means that we now offer 'the whole package,' both contacting and non-contacting instrumentation, giving our customers a wider product choice.

Georgina Perkins, the new MD responsible for amalgamating Pulsar and Greyline, explains "our global customers recognize and value the unique customer service both Pulsar and Greyline offer today. By combining over 40 years of flow and level measurement expertise our customers will benefit from even greater measurement choice, wherever they operate in the world."

2020 is set to be an exciting year for both Pulsar and Greyline as they embark on their new journey together.
